

BONES

The most popular Halloween children's skeleton costume is the ghost-like one, which is a vital system in the body that cannot be lived without, making it a frightening and frightening choice for Halloween.

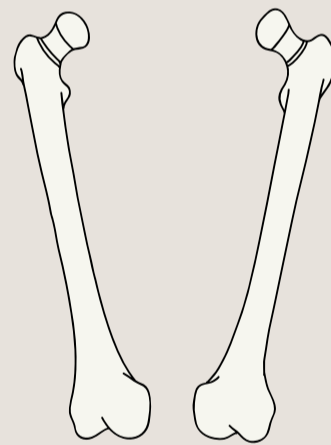

- The **Cranium** is the first one, safeguarding the brain from impacts and jolts.
- The **Mandible** is known as the lower part of the skull and is the biggest and most robust bone in your face.
- Combined, they form the **Skull**.

- The **Scapula** is a triangular-shaped bone in the shoulder, while the rib cage protects the lungs and heart.
- The **rib cage** is delicate and can be damaged by accident, sports, or powerful sneezes.
- The **cranium** protects the brain.

- The human arm consists of three essential parts: the **humerus**, **radius**, and **ulna**, connected to the elbow joint and wrist.
- The palm, consisting of **carpals**, **metacarpals**, and **phalanges**, is the most used part of the body, used daily for tasks like brushing teeth and eating dinner.

- The **femur**, the longest, heaviest, and strongest bone in humans, supports all bodyweights during activities like running, jumping, walking, and standing, making it the most crucial bone in the body.

- The **fibula** and **tibia** are two bones in the skeletal system, providing attachment for muscles and supporting the leg.
- The **fibula** is thinner and outer, while the tibia is the strongest weight-bearing bone in the lower part of the body.

FUN FACTS
