

CAN DOGS SEE COLOR?

Dogs are descendants of wolves. They are known for their diverse behaviors, sensory abilities, and physical traits.

EYE CELLS

- **Rod cells:** Detect light levels and motion.
- **Cone cells:** Detect and analyze colors.

CAN DOGS SEE COLOUR?

Dogs have dichromatic vision, meaning they see limited colors, primarily blue and yellow. They lack red and green cones.

FUN FACTS:

- Dogs have more rod cells, enhancing motion and low-light vision.
- A dog's sense of smell is 10,000 to 100,000 times stronger than a human's.
- The oldest dog on record lived to be 29 years old.
- Puppies are born blind, deaf, and toothless.
- Dogs have three eyelids, including one for protecting and moistening the eye.
- The average dog can run at speeds of 19 mph (30 km/h).
- Dogs curl up to sleep to protect their organs, a habit from their wild ancestors.
- Dogs can feel jealousy and experience emotions like humans.
- The world's smallest dog breed is the Chihuahua, while the tallest is the Great Dane.
